OBJECTIVES AND METHODS

The U.S. Army Environmental Center (AEC) tasked the Mandatory Center of Expertise for the Curation and Management of Archaeological Collections (MCX) with the job of assisting Army installation personnel in complying with the requirements of the Native American Graves Protection and Repatriation Act (P.L. 101-601, NAGPRA). The MCX was asked to locate and assess archaeological collections derived from Army-owned lands, to identify the federally recognized Native American tribes most likely culturally affiliated with the collections, to draft Section 6 Summary letters for each installation, and to conduct physical inventories of any collections that contain human skeletal remains. This report conveys the results of the collections research completed to assist Fort Ord in complying with the Section 6 Summary requirements of NAGPRA.

The MCX used a two-stage process to identify, locate, and assess the contents of archaeological collections from the installation. First, archival research was performed to review all archaeological site records and reports for the installation. Second, telephone interviews were conducted with personnel at installations, universities, museums, and archaeological contractors that were identified during the archival research as possible repositories of Army collections.

Archival research for Fort Ord began with a search of the National Archeological Data Base (NADB) for references pertaining to the installation. This was followed by a thorough examination of all archaeological site forms and a literature review of all pertinent archaeological reports and manuscriptson file at the California Historical Resources File System, Northwest Information Center in Rohnert Park, California. The records search was performed at the Northwest Information Center in February 1995 and sought to identify any work on the installation that may have produced archaeological collections.

Subsequent telephone interviews to potential collections repositories ascertained whether the materials were present and the range of objects in each collection. Once the collections were located and assessed, MCX personnel identified federally recognized Native American tribes that are likely to be culturally affiliated with the materials in the collections.

RESEARCH RESULTS

ARCHAEOLOGICAL INVESTIGATIONS AT FORT ORD

Various individuals and groups have conducted archaeological investigations on Fort Ord beginning in 1949:

A.R. Pilling and E. R. Lyons, University of California, Berkeley
Archaeological Consulting, Salinas, CA
Archaeological Resources, Inc., Costa Mesa, CA
Geo-Marine, Inc., Plano, TX
Jones and Stokes Associates, Inc., Sacramento, CA
Ann S. Peak & Associates, Sacramento, CA, and
Professional Analysts, Eugene, OR.

Two investigations produced collections: the University of California at Berkeley, and Geo-Marine.

A.R. Pilling and E.R. Lyons recorded sites on Fort Ord property in 1949-50 as part of graduate research, while students at the Department of Anthropology, University of California, Berkeley, and collected porcelain fragments from a historic home site (CA-Mnt-200).

Between 9 November and 10 December 1993, Geo-Marine, Inc. conducted a survey of 783 hectares at Fort Ord. This cultural resources survey was designed and administered by the U.S. Army Corps of Engineers (USACE), Sacramento District with assistance from the Construction Engineering Research Laboratory (CERL) as part of the Fort Ord Base Realignment and Closure (BRAC) procedure. Geo-Marine, Inc. researched previous cultural resource investigations at Fort Ord, and conducted their own. These investigations consisted of systematic surveys and shovel-tests. Prehistoric artifacts recovered from this work include an abalone shell and six possible fragments of lithic debitage. Historic adobe brick was also collected. Four isolated finds were collected; one historic ceramic and three prehistoric lithic flakes.

SUMMARY OF ARCHAEOLOGICAL COLLECTIONS

The total volume of archaeological materials and associated documentation identified from Fort Ord is undetermined as of the date of this report. The following two repositories have been identified for Fort Ord collections:

CERL, Champaign, Illinois:	2 ft ³ of boxed materials
Phoebe Hearst Museum, University of California, Berkeley:	volume unknown

The Hearst Museum requests that all inquiries regarding collections housed at their facility be addressed in writing. The MCX complied with this request through a letter dated 30 August 1995. A reply dated 18 September 1995 confirmed that the collection from CA-Mnt-200 is curated at the Hearst Museum, and that there are no skeletal remains in this collection, but the volume of the collection was not provided. According to site forms, this collection contains historic porcelain.

The attached *Summary of Current Locations of Archaeological Collections from Fort Ord* (Appendix I) provides detailed information about each collection derived as a result of archaeological investigations at the installation. A collection consists of all of the materials, artifacts and associated documentation (e.g., field notes, maps, photos, data analyses, correspondence), produced as a result of an archaeological investigation or project at a single site or multiple sites. In some cases, the same archaeological site may have been investigated by various individuals or organizations. Depending on where the resulting collections are curated, they may be stored and identified as separate collections or separate components of a single collection. In cases where the artifacts and records have become separated, we list the records collections repository as well.

Every attempt has been made to locate all collections cited on available archaeological site records or in published and unpublished references to archaeological investigations on the installation.

NAGPRA-Related Materials

No sacred objects, funerary objects, or human skeletal remains were identified in a thorough review of archaeological records, associated literature, and telephone interviews. The final determination of sacred objects or objects of cultural patrimony may be established in consultation with the associated Native American tribes.

At present, there are no federally recognized tribes associated with the geographical area now occupied by Fort Ord. Several groups from the area are petitioning the Bureau of Indian Affairs for federal recognition. According to NAGPRA, repatriation of NAGPRA-specific objects should be made to federally recognized tribes. If tribes aboriginally associated with the area of Fort Ord become federally recognized, they should be invited to participate in the consultation and repatriation process.

REFERENCES TO ARCHAEOLOGICAL INVESTIGATIONS

Two sets of references regarding archaeological work conducted on Fort Ord are attached: Appendix II contains the list of references reviewed by the MCX during its archival research; Appendix III is the list of references contained in the National Archeological Data Base (NADB).

NATIVE AMERICAN TRIBES ASSOCIATED WITH FORT ORD

At the time of European contact, the Rumsen tribelet inhabited the area that comprised Fort Ord in Monterey County (Heizer and Whipple 1971:Map 1; Levy 1978:485, Fig. 1). Rumsen is one of eight related "Costanoan" languages spoken aboriginally along the coast of California. Costanoan is a linguistic term, first used by Spanish missionaries to designate tribes of people living along the California coastal bay areas between San Francisco and Monterey who spoke similar languages. Fellow Costanoan-speakers, the Mutsun and the Chalon tribelets, lived immediately north and southeast of the Rumsen, and Esselen-speakers were immediately south of the Rumsen (Levy 1978:485, Fig. 1; Hester 1978:496, Fig. 1). A third language group, the Salinan, were located south of the Esselen and Costanoan. Waite cites the Rumsen, the Calendaruk and the Ensen [syn. Esselen] as having occupied the vicinity of Fort Ord based on translations of mission documents by Milliken (Waite 1995:23).

All of these tribelets were brought into the Spanish mission system in the late 18th Century and suffered heavy population losses as well as loss of their aboriginal territories. Families descendant from these peoples are seeking a revitalization of their traditional cultures, conducting extensive research into their histories, and actively pursuing state and federal recognition as tribal entities (Eidsness 1994; Nason 1994; Yamane 1994). This revitalization first began among the Costanoan peoples of the San Francisco Bay area who have adopted the name Ohlone, which was one of the tribelets baptized by the Spanish. Some descendants use the terms Costanoan and Ohlone interchangeably today (Yamane 1994:143).

At the present time, there are no federally recognized Native American tribes for the Fort Ord area. Many groups have recently filed Letters of Intent to Petition with the Bureau of Indian

Affairs for federal recognition: Costanoan Band of Carmel Mission Indians, Ohlone/Costanoan Muwekma Tribe, Indian Canyon Band of Costanoan/Mutsun Indians, Salinan Nation, Amah Band of Ohlone/Costanoan Indians, Esselen Tribe of Monterey County, Ohlone/Costanoan-Esselen Nation, Salinan Tribe of Monterey County, Costanoan-Rumsen Carmel Tribe, and Costanoan Ohlone Rumsen-Mutsun Tribe (B.I.A. 1995:6-7).

SECTION 6 COMPLIANCE

P.L. 101-601 (NAGPRA) requires that federal agencies engage in active consultation with Native Americans of federally recognized tribes and/or lineal descendants who may be culturally affiliated with the archaeological collections from the installation.

The tribes referenced in the previous section of this report do not fit the legal description of tribes as defined for the purpose of this piece of legislation because they lack federal recognition. They are currently petitioning the Bureau of Indian Affairs for this designation. If this status is conferred upon these groups in the future, they will be eligible for repatriation of objects and human skeletal remains defined by NAGPRA.

APPENDIX I

SUMMARY OF CURRENT LOCATIONS OF ARCHAEOLOGICAL COLLECTIONS FROM FORT ORD, CALIFORNIA

All collections information has been entered into a Paradox data base file and can be queried by any of the fields listed below, as well as by the name of the installation and by MACOM. The data base will be delivered by the MCX to the U.S. Army Environmental Center upon completion of the U.S. Army NAGPRA Compliance Project. Inquiries for additional information are welcome (MCX: 314-331-8865; U.S. Army Environmental Center NAGPRA Compliance Project: 410-671-1573). The data fields listed in the summary of collections contain the following information:

REPOSITORY:	The current location in which the collection is stored, as of the date of this report.
REPOSITORY POC:	The person contacted by the MCX, or the person to whom inquiries regarding the collection should be addressed.
TELEPHONE:	The telephone number for the repository POC.
COLLECTION ID:	The identifying unit used by the repository to store and/or locate the collection. This can be a unique accession number assigned by the repository, the archaeological site number or project name, the name of the collector of the collection, or another number or name assigned by the repository.
SITE NUMBERS:	The official site number or name only for those sites from which materials were collected. An investigator may have performed work at additional sites but did not collect any materials. Those site numbers are not included in this field.
FIELDWORK DATES:	The date(s) during which the investigation(s) occurred. This information is provided to differentiate between projects that may have investigated the same site repeatedly.

EXCAVATOR/COLLECTOR: The individual and/or organization that conducted the investigation.

COLLECTION SIZE: The volume or number of objects in a collection, estimated by the repository POC or from project reports.

DESCRIPTION OF MATERIALS: General material classes of the objects in the collection derived from data provided on site records, in references, and/or by the Repository POC.

ANTIQUITY/ARCH. PERIOD: Chronological or cultural-historical designations recorded on site records or in references specific to the collection.

CULTURAL AFFILIATION: This column contains only those ethnic identifications found in the site records or references specific to the collection. This field is left blank if no such information was recorded.

BASIS OF DETERMINATION: Documents the source of the cultural affiliation information (e.g., site record, oral testimony, reference).

SECTION 5 MATERIALS: Describes the number and kind of human skeletal remains and associated funerary objects in the collection, as indicated by the site records, references, repository management documents, or information from repository POC. If these materials are present or are suspected to be present, NAGPRA Section 5 requires a physical inventory of the materials.

Summary of Current Location of Archaeological Collectio

As of September 1993

Repository	Repository POC	Telephone	Collection ID	Site Numbers	Fieldwork Dates	Excavator
Construction Engineering Research Laboratory (CERL), Champaign, IL	Dr. John Isaacson	(217) 373-6749	Fort Ord	CA-MNT-1731h; CA-MNT-416 (revisit)	Nov. 9 - Dec. 10, 1993	Geo-Marine
Phoebe Hearst Museum, Berkeley, CA	Fritz Stern, Edward Lube	(510) 643-7884	Accession No. 962	CA-MNT-200H	Feb. 3, 1949	A.R. Pillin Lyons

APPENDIX II

MCX LIST OF REFERENCES

In addition to the references reviewed by MCX personnel at the archaeological site information center, every attempt was made to obtain references cited but not on file. Information taken from these references was coded for data relating to collections made from sites located on installation property (see attached sample of PD-C Bibliographic Data Sheet form) and entered into a data base for ease of manipulation.

Report titles were drawn directly from the title page of reports, and consist of the following fields:

FIELD	DATA ENTERED
Subject Property	Army Installation name
Last Name	Primary author's last name
First Name	Primary author's first name
Middle Initial	Primary author's middle initial
Secondary Authors	Names of secondary authors, <i>or</i> in instances where the author is a company rather than an individual, the company name is listed here.
Title	Title of the reference. For letter reports, the person or agency to whom the correspondence is addressed is listed as the title.
Series	If the report is part of a publication series, the name and number are provided here.
Date	Date of publication or submission
Length	Report length in pages
Contract Number	Contract number and delivery order number, if applicable

The data for the next three fields are drawn directly from the report title page and reflect the hierarchy of contracting agencies involved in accomplishing the work. In some cases, the sponsoring agency is listed as the Army installation; in others, the intermediary contracting agent, (e.g., the Army Corps of Engineers or the National Park Service) is listed as the Sponsoring Agency.

Sponsoring Agency	Agency for which the report was prepared
Contractor	The agent contracted to perform the work
Subcontractor	The agent subcontracted to perform the work

The majority of the citations for archaeological investigations on Army land refer to unpublished reports prepared under contract with federal agencies, consequently the MCX printout was designed to address these reports. In instances where the author is a company rather than an individual, the company name is listed in the Secondary Authors field (due to the length of the field). For published references, the publisher is listed in the Sponsoring Agency field.
